Project 3 - Data Appendix

Fossil Dataset

The fossil dataset is sourced from the Ludlow Museum Fossils in Shropshire Project. After cleaning the dataset, it contains 6 columns and 2,342 unique fossil images. In addition to the image url's, the dataset has columns providing more information about each specific fossil, including a brief description, the taxonomy, the period, and the type of object. The fossils are sorted into 11 different periods. The data dictionary is displayed below.

Data Dictionary

Column	**Description**	**Potential Response**
fossil_id	Id number associated with the image	6696
Description	Brief description of the fossil	Fossilised remains of a shell valve from the Cretaceous bivalve Hinnites sp. Found in Cambridge.
object_name	Type of object	Cephalopod
period	Period the fossil is from	Devonian Period
taxonomy	Classification of organism	Dalejina hybrida
Url	Url for the image	https://data.nhm.ac.uk/media/ludlow:G.00183.jpg
